

ERGONOMICALLY AND GENTLE BEAD BREAKING

AHCON bead breakers press the tire to remove the rim horizontally. This method ensures a much lower number of pressure damages to the rim and a much better working posture compared with the use of traditional vertical bead breakers.

AHCON bead breakers are available in 3 different variants: The basic model BBRT 700 – and the BBRT 900 and BBRT 900XL. The latter two are equipped with extra functions such as among others a magic arm, that is especially good when working with alloy rims.

FEATURES

- Horizontally beadbreaking
- A low number of damages to rims
- Including a wheel turning plate – and thus no manually lifting is required
- High level of ergonomics
- Can be combined with more AHCON equipment to a complete tire assembly line
