

SAFE INFLATION FOR THE LARGEST OF TYRES

AHCON X-BOX is a safety inflation cage for very large tyres. The X-BOX differs from our other inflation cages by being designed to load the wheels horizontally.

The benefits of this construction covers several points. First of all it means, that you avoid rolling the wheel into the cage and thereby avoid the risk of knocking it over. At the same time – with wheels placed horizontally – the air pressure of an exploding tyre will be directed down or up.

The wheel can be loaded into the cage horizontally with a forklift truck.

X-BOX is absolutely the most secure inflation cage for large wheels on the market – and especially wheels with locking rings.

FEATURES

- The wheels are loaded and inflated horizontally
- Can handle extra large wheels
- Load the wheels using a forklift
- The most secure way to inflate large wheels

The cage is made in a version of SIMPLEX and a version of DUPLEX wire mesh - which means both with a single and with a double protection layer.
