

WHEEL LIFT WL 900+

AHCON's fully automatic wheel lift is the perfect first element in an ergonomic assembly line for wheels.

With a wheel lift the fitter avoids having to bend down and perform heavy lifting from the floor in order to get the wheels up to the same height as, among other things, the bead breaker and tyre changer.

The lifting function is automatically triggered when a wheel is rolled onto the plate in front of the wheel lift.

WL 900+ is equipped with a support table, with room for 3 wheels whereby the wheel lift in total can handle 4 wheels at a time.

FEATURES

- No more manually lifting from the floor to the bead breaker or tyre changer
- Fully automatic function
- With rolls for an effortless transport of the wheel
- Including supply table for 3 wheels
- Room for 4 wheels in total
